

# Jenkins pipeline – quick start

## Setup:

1. Go to new 
2. Give the job a name
3. Choose **Pipeline** and press **OK**

4. Scroll down until you see **Pipeline**.
5. Inside the text area the Pipeline will be defined.

## Scripted pipeline:

A scripted pipeline will:

- A. Start with the word **node**
- B. Have **stages** with names
- C. Have the action

```
node {  
  stage('Build') {  
    echo 'Build'  
  }  
  stage('Deploy') {  
    echo 'Deploy'  
  }  
}
```

## Declarative pipeline:

A declarative pipeline will:

- A. Start with the word **pipeline**
- B. Have agent specifications
- C. Have **stages** with names
- D. Have steps including the action

```
pipeline {  
  agent any  
  stages {  
    stage('Build') {  
      steps {  
        echo 'Build'  
      }  
    }  
    stage('Deploy') {  
      steps {  
        echo 'deploy'  
      }  
    }  
  }  
}
```
