

REST API

1. Create currency converter according to the specifications in “**Currency Converter**” file.
2.
 - A. Use your Google places **API key** to perform the following request from your code using json module:
https://maps.googleapis.com/maps/api/place/textsearch/json?query=restaurants+in+Jerusalem&key=YOUR_API_KEY
 - B. Parse the response and print the latitude and longitude of the first result.

****IMPORTANT NOTE!!**

If you are not getting any response, take the URL and test it in your browser.

If you are getting the following error message:

"error_message": "This API project is not authorized to use this API.
It means, you didn't enable the API.

Please go to

https://console.developers.google.com/apis/api/places_backend?project= than find your project, press on “Google Places API Web Service” and press enable.
