

## Python Installation

- A software development kit (SDK or devkit) is typically a set of software development tools that allows the creation of applications
  - for a certain software package.
- Python SDK including Python native code libraries,
  - Python interpreter, Python debug, and more.
- This is necessary to write and execute python code.

1. Google search for **Python download** and enter python.org

2. Press Download Python 3.6.5 (choose other OS in case it is not windows)
3. Once the installer opened, make sure you mark **"Add python X.XX to path"** and then press **"Install now"**

4. Validate Python is installed by doing the following steps:
  - A. Open CMD / Terminal.
  - B. Type python -V
  - C. Python version will appear at command line.

```
C:\Users\dgot1>python -V  
Python 3.4.0
```
