

ELK downloads

Elastic search

1. Download elastic from the following address:

<https://www.elastic.co/downloads/elasticsearch>

2. Choose your OS:

3. To setup elastic search:

- Extract zip to a known location
- Open CMD / Terminal
- CD to the extracted zip\bin
(e.g. ..\elasticsearch-6.5.4\bin)
- Run elasticsearch (.bat for windows)
- Wait until you see the text: **started**
- Open any browser and navigate to localhost:9200
- Make sure you see some data:

```
{
  "name": "elasticsearch",
  "cluster_name": "elasticsearch",
  "cluster_uuid": "iE...fZw",
  "version": {
    "number": "6.5.4",
    "build_flavor": "default",
    "build_type": "zip",
    "build_hash": "..."
  }
}
```

Kibana

1. Download Kibana from the following address:

<https://www.elastic.co/downloads/kibana>

2. Choose your OS:

3. To setup Kibana:

- Extract zip to a known location
- Open the **bin** folder (e.g. “cd <Kibana unzipped folder>\ **bin**”)
- Now go to bin folder and run **bin/kibana** (or **bin\kibana.bat** on Windows)
- Open any browser and navigate to your local elastic search engine at <http://localhost:5601/>
- You should see the text: **server is running**.

Logstash

1. Download Kibana from the following address:

<https://www.elastic.co/downloads/logstash>

2. Download the zip file:

3. Extract zip to a known location

Grafana

1. Download Grafana from the following address:

<http://docs.grafana.org/installation/>

2. Pick OS:

- Installing on Debian / Ubuntu
- Installing on RPM-based Linux (CentOS, Fedora, OpenSuse, RedHat)
- Installing on Mac OS X
- Installing on Windows

3. Choose CPU architecture:

| Description | Download |
|-----------------------------------|----------|
| Latest stable package for Windows | x64 |

4. Press address containing zip to download:

```
Standalone Windows Binaries (64 Bit)

wget https://dl.grafana.com/oss/release/grafana-5.4.2.windows-amd64.zip
unzip grafana-5.4.2.windows-amd64.zip
```

5. Extract zip to a known location

6. Open the **bin** folder (e.g. "cd <Grafana unzipped folder>\ **bin**")

7. Run **grafana-server** (.exe for windows)

8. Open any browser and navigate to your Grafana dashboard at

<http://localhost:3000/>

Postman

Postman is cloud based API Testing REST client software.

It provides API Development environment and comes with tests for assertions.

You can use a dedicated app interface to organize and save your tests.

Postman is now used by well over 5 million developers around the world.

1. Download Postman from:

<https://www.getpostman.com/apps>

2. Open software – no special configuration needed.
