

PyCharm download and setup:

1. Go to PyCharm download page:
<https://www.jetbrains.com/pycharm/download/section=windows>
2. Press download under Community:

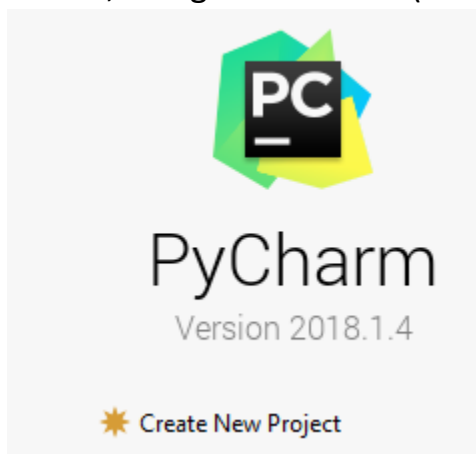

Community

Java, Groovy, Scala and
Android development

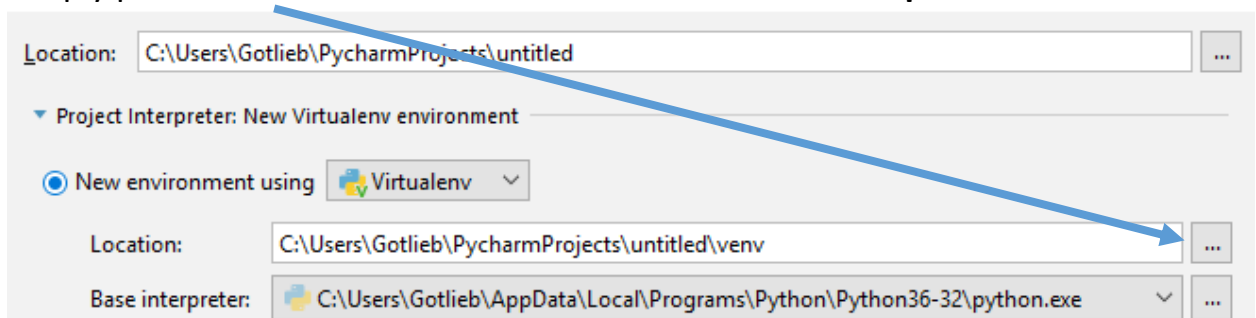

Free, open-source

3. Once PyCharm will start, press on "Create New Project" in the welcome screen, and give it a name (does not matter):

4. Next you will be asked to choose the Python interpreter.
5. Simply press the 3 dots at the end of the line of "**Base Interpreter**"

6. And choose the file **Python.exe** from Python installation path

7. The default is: C:\users\<USER_NAME>\Appdata\Local\Python\Python36-32\Python.exe

8. **That's it.. We are officially ready to start Python development!**
