First class

Create a program with the following:

A.

1. Create a variable name first with value 7.
2. Create a variable name second with value 44.3.
3. Print result of adding first to second.
4. Print result of multiplying first by second
5. Print result of dividing second by first

B.

What will be the values of a, b, c at the end?

```
a  =  8
a  =  17
a  =  9
b  =  6
c  =  a+b
b  =  c+a
b  =  8
```

C.

Is there a difference between the two lines below? Why?

name = "john"

name = 'john'

What is the issue with the code below?

```
my_number = 5+5
print("result is: "+my_number)
```

Suggest an edit.

D.

What will be the output?

```
x = 5
y = 2.36
print(x+int(y))
```

CHALLENGE:

Fix the following code, without changing a or b

```
a = 8
b = "123"

print(a+b)
```
